

# 2020 Cloud

**2020 Cloud brings Peace of Mind and Security without the hassle. No capital spend on hardware and no software updates to worry about, simply a safe eye on your assets, regardless of location, 24/7/365.**

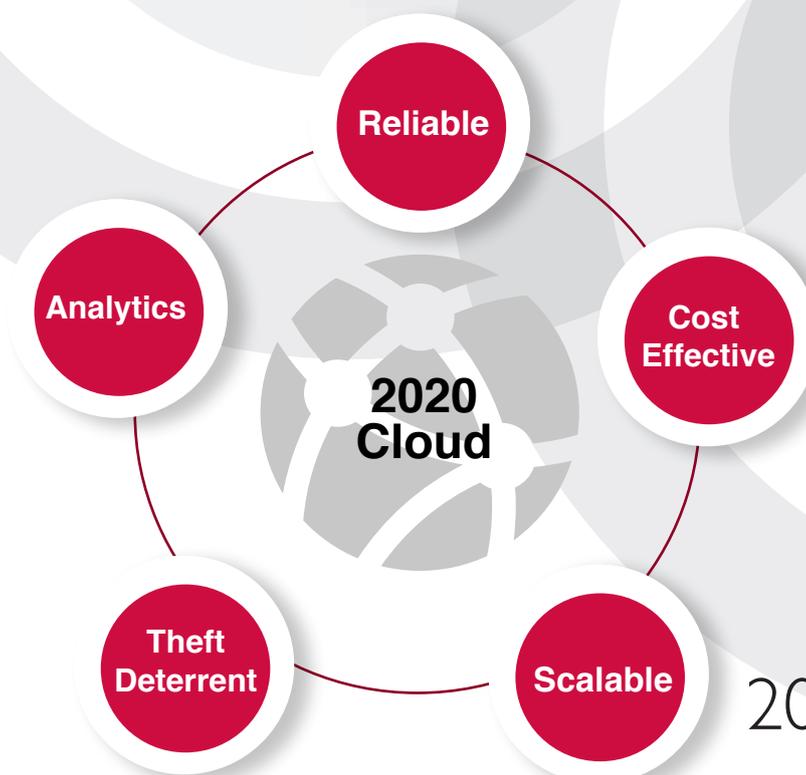

Our Cloud Based Corporate video management software is compatible with over 4000 camera models, allowing you to rest in the knowledge that your business, property, staff and assets are safe, even when you're not there.

## The Cloud

2020 Cloud allows you to build a system from a single camera installation to an unlimited number of cameras in multiple locations viewed in your Control Room, Computer, Smartphone or tablet 24/7. There are no servers or NVRs for you to manage, nor is there any software for you to update. All of these vital responsibilities are handled by us in the Cloud, allowing you to have the most up-to-date technology everyday, so that you can focus on what you do best: your job. What's more, the system is completely scalable, meaning you pay only for what you use, further reducing your running costs.

Our Cloud Based Management Platform can manage multiple locations with ease. Furthermore, as all of your data is held securely off-site at dedicated data centres, there is no risk of anybody trying to destroy the evidence after committing a crime on the property. We are Accredited to ISO27001 and use AES-256 Encryption alongside multi-site data-backups as standard. Your data has never been safer.

2020 Cloud also comes with advanced video analytics that notify you with real-time alerts as soon as there is anything suspicious on your property. It can also build reports to better understand your business, allowing security to concentrate on their job, rather than simply monitoring CCTV footage.

## Cost Effective

Not only are there no upfront costs other than the security cameras, there are no software update costs and with the analytics, your security staff can be put to more efficient use.

## Secure

Not only do we use industry leading encryption technologies, the very nature of the cloud means that evidence cannot be lost or stolen with automatic backups and Geo-redundant storage (GRS). You can set access-rights to specific users so that only those that need to see certain areas can.

## Scalable

Your security can grow with your business- add and remove cameras and feeds as you see fit and only pay for what you use. Furthermore, with everything hosted in the cloud, you do not need an expensive new NVR for each additional site you add to your estate.

## Global

Securely use the 2020 Cloud from anywhere in the world on any device. Follow up on alerts and analyse any footage you want, even when you aren't in the office. This is particularly important for regional security managers who look after multiple locations. Now you really can centrally manage your system completely.

## Other Uses

Whilst a fantastic use for security, the 2020 Cloud and cameras can also be used for in various data analysis roles such as: Automatic Number Plate Recognition (ANPR), Marketing Analytics, Health and Safety, Quality Assurance and lots more.

Talk to the experts

2020 Vision Systems are security professionals, skilled in the deployment of cloud based security solutions.

**All systems are designed to secure property, protect assets and ensure safe working environments.**
