

ADD NEW REVENUE STREAMS TO YOUR BUSINESS

DO YOU WANT TO BRING ADDED BENEFIT TO YOUR CLIENTS OR INCREASE YOUR SERVICE OFFERING?

Then work with us, 2020 Vision the physical security specialists for an IP centric world, adding value to your business portfolio.

In today's troubled world the protection of people, property, and information from a dynamic and evolving range of physical threats is paramount. As an IT professional providing unified communications to your clients or as a structured cabling contractor, if you are not currently offering your clients physical security systems - network video, access control and IP enabled Security devices you could be missing a great opportunity to increase your business revenue.

As physical security specialist's we understand that you know about logical network security but cannot be experts in everything. However, as your IP Security division we can deliver you extra value by bridging the knowledge gap, enabling you to expand your service offering, maximising your potential and adding value to your clients.

The Opportunity

Using 'Internet Protocol' (IP) enabled security systems is now a reality that brings many business benefits, including business intelligence, operational management control, health and safety monitoring, environmental monitoring and physical security as well as reduced capital and revenue costs.

Since IP enabled systems are interoperable and modifiable, they are also flexible and adaptive. As new functions and features become available through technological advancements, companies and organisations can incorporate them into their existing systems without the need for new infrastructure.

In a world where High Definition (HD) is present in our everyday home life, with TV, Smart Phones, and Cameras, why would your customers consider anything else for your organisation or business?

The IP Network

The heart of any IP based solution is the network, and the structured cabling, including Category 5e, 6 or 6A and that's your expertise. With the introduction of Power over Ethernet (PoE) it's possible to power a variety of products over this cabling infrastructure.

In addition this infrastructure allows all of the security systems to be 'Converged' on to one common platform bringing together people, processes and technology providing business benefits to the user, saving time, and therefore money. More and more people are becoming wise to this fact and seeing the true benefits of implementing a fully integrated physical security system.

Working partnership with 2020 Vision, you can increase your potential revenue streams by:

- Selling more products and solutions to your existing customer base
- Winning new business by offering a fully integrated solution
- Ensure that your customer stays with you rather than moving to a 'full service' provider
- Embrace IP Convergence and evolve your business

2020VISION
TECHNOLOGY

BENEFITS OF IP CONVERGED SECURITY SYSTEMS

- Better image quality using 720p, 1080p & 4K resolutions
- Intelligence where you need it, when you want it, delivered and presented in a useful format.
- Scalability, the ability to deploy a virtually unlimited number of cameras, controlled doors, detectors
- Complimentary analytics software is widely available
- Rapid deployment of technology for temporary use
- Energy saving through the deployment of PoE based solutions.
